DATA CONSISTS OF daily study hours vs exam scores

Dataset consists of:

- (X): Daily Study hours
- (Y): Exams Score

Statistical Calculation:

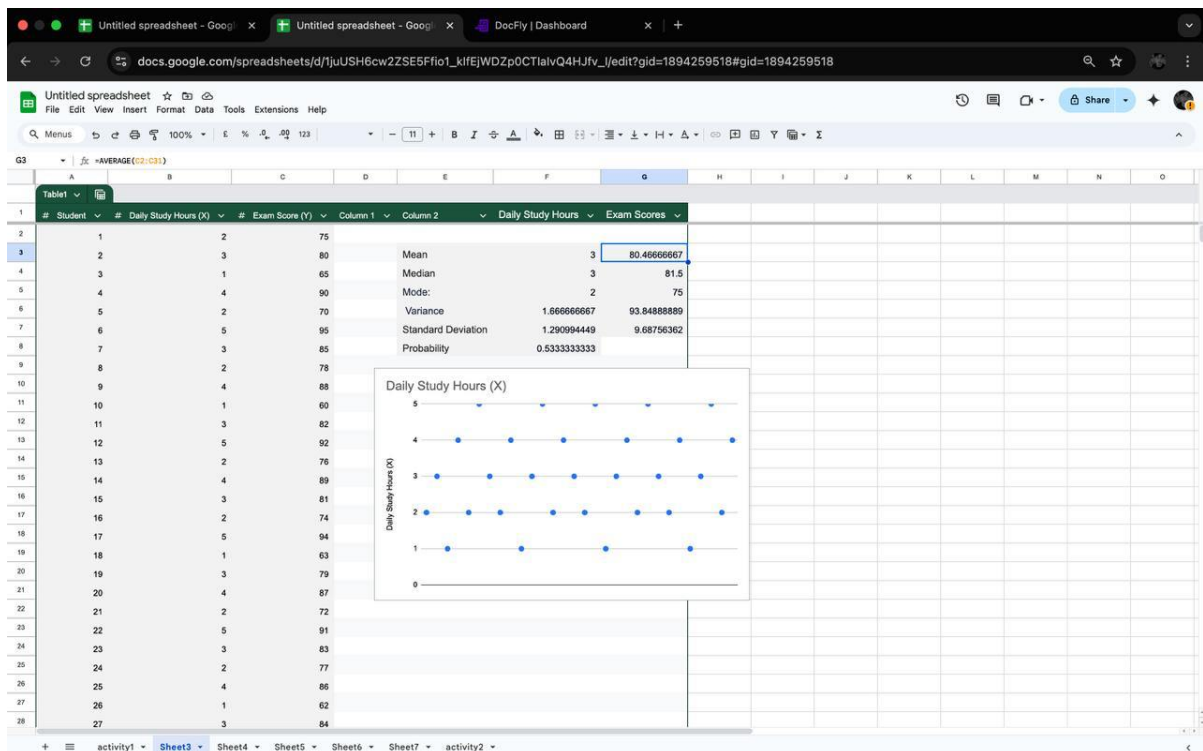

Mean:

The mean(average) is calculated as:

$$\text{Mean} = \frac{\sum X}{N}$$

where X is the sum of all values, and N is the total number of values.

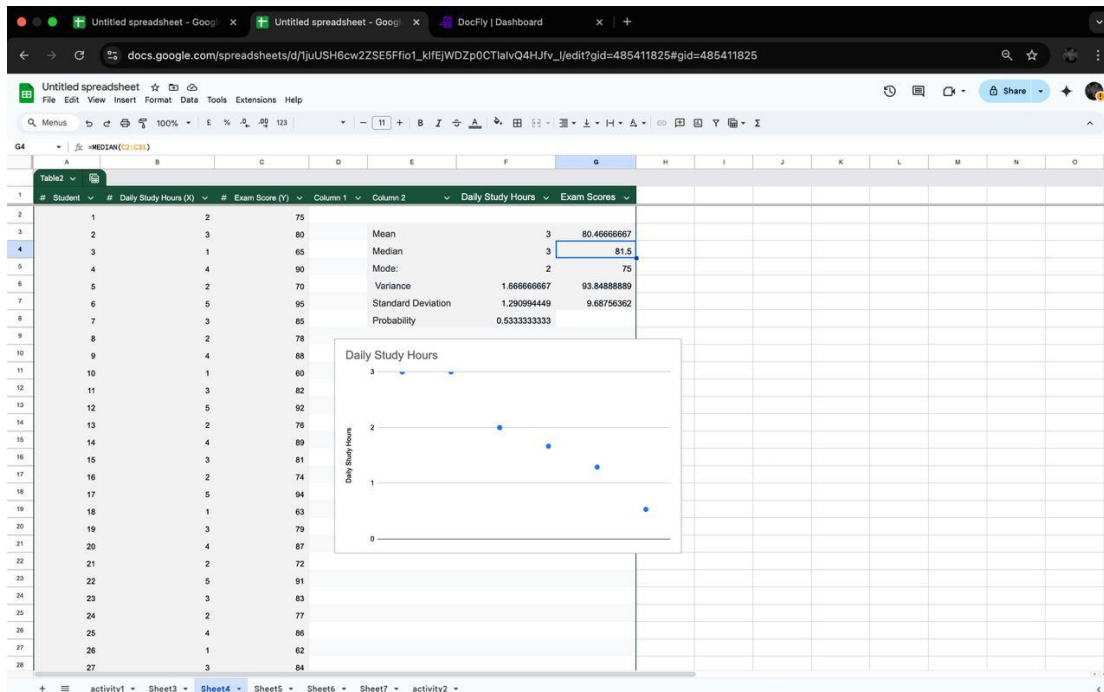

Mean of Daily Study Hours(X) and Mean of Exams Score(Y):

Median:

- The median is the middle value when data is stored.

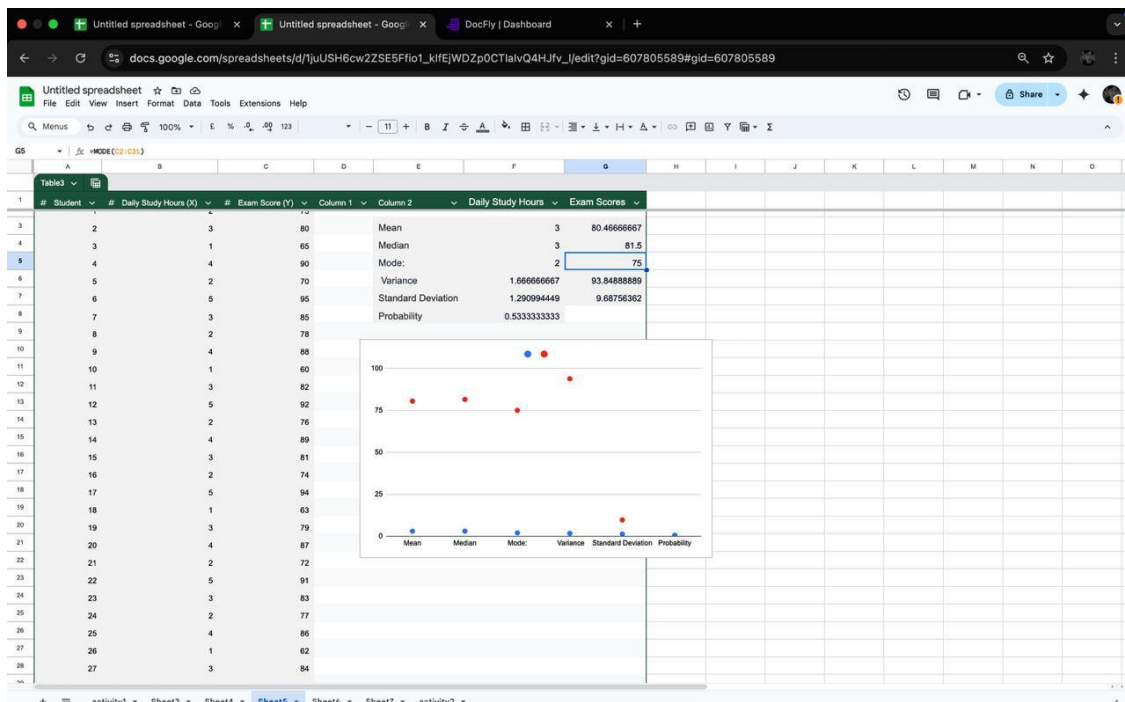

Median of Exam Scores:

MODE:

The mode is the most frequency of occurring value.

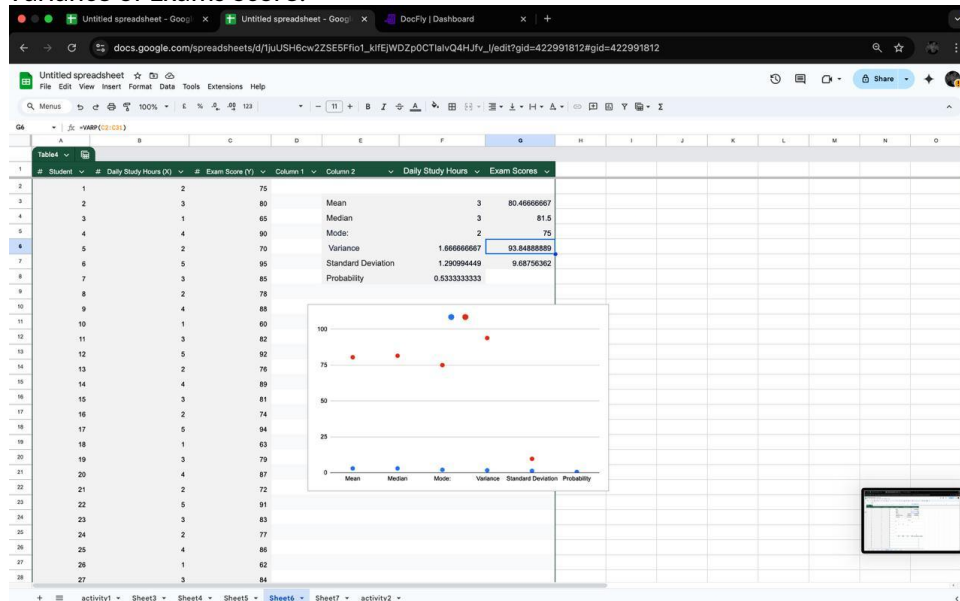

Mode of Exam scores:

Variance:

Variance quantifies the variability or spread of a dataset around its mean (average).

Variance of Exams Score:

Standard Deviation:

- Standard deviation tells us how much values deviate from the mean.
- Standard deviation is square root of Variance.

Standard Deviation of Exams Score:
